EXPERIENCE

Full Stack developer intern Hidden Gem Tech

11/2024 - 03/2025 Bangkok

- As a Junior Developer at Hidden Gem Tech, a public organization in Thailand focused on developing technology and media solutions, I was tasked with researching and evaluating payment gateway options for integration into the Nightlife Run project.
- After a few weeks, I transitioned to implementing a real-time auction algorithm that played a key role in the project's functionality.
- Throughout my four-month internship, I gained hands-on experience developing the mobile client using Flutter/Dart and building the backend with Node.js.
- I have also integrated Stripe for payment processing, and used Socket.io and OneSignal for real-time notifications, improving both user experience and transaction efficiency.

Full Stack developer intern IECISA

02/2020 - 06/2020 Madrid, Spain

- As a Full Stack Developer Intern at IECISA, a technology innovation company within the El Corte Inglés Group, I contributed to developing a project using Java Spring Boot and Spring Data JPA for the backend.
- For the frontend, Angular was used to ensure a maintainable and scalable interface.
- My responsibilities included designing and implementing an MVC architecture, integrating a database for data storage, and ensuring seamless data access using Spring Data JPA.
- This internship enhanced my Java and backend skills, while also providing hands-on experience with front-end frameworks.
- Additionally, I gained understanding of project automation tools like Gradle and Maven, which helped streamline the development process

Self-projects

- Mobile**
 - Kh App** – Appointment and billing management app (Flutter, Bloc, ObjectBox)
 - Flash Card App** – Vocabulary learning tool with integrated dictionary API and local persistence (Flutter, REST API, ObjectBox)
 - Eg-Drive** (In Development) – Ride-hailing prototype for Equatorial Guinea, focusing on local transport solutions (Flutter, Node.js, MongoDB, Google Maps API)
- Full-Stack/Web Apps**
 - KH Web Project** – Full-stack platform for a nail shop with admin dashboard & client site (React, Node.js, Express, MongoDB, AWS S3, Docker)
 - Eg-Trivia** (In Development) – AI-powered trivia platform generating quizzes from user-created topics (React, Node.js, OpenAI API)

SUMMARY

SOFTWARE DEVELOPER Highly motivated Software Engineer, Gregorio Eyi, with expertise in Flutter/Dart, Node.js, and MongoDB. Proven ability to quickly learn and apply new technologies, demonstrated through successful internship projects and personal development. Originally from Equatorial Guinea, I honed my skills through studies in Spain and I am now based in Bangkok, where I have recently completed my second degree, but I will be moving to Spain soon.

KEY ACHIEVEMENTS

- Enhanced Payment Systems
- Effective Real-Time Notifications
- Built Reliable Architecture
- Boots connection with Socket.IO

SKILLS

Flutter	React	NodeJS
Express	MongoDB	GitHub
Docker	AWS	Java
SpringBoot	MySQL
